

**Badger®
Series 4000
Flow Sensor**

**Impeller PVC & PVDF
Ultra Pure Water
Pulse & Analog**

**Technical
Brief**

The Series 4000 flow sensor is an in-line, flow-through design using a tangential six bladed impeller.

The Badger® Series 4000 is available in ½", ¾", and 1" pipe sizes and is molded of PVC or PVDF materials. The compact design allows the Series 4000 to replace old style magnetic sensors with little or no piping changes.

Series 4000 Ordering Matrix

The proprietary non-magnetic detection circuit is available with two output: a low impedance 3-wire 5 volt DC square wave signal (that can be pulled up to 20 volts) capable of traveling up to 2000 feet without amplification, or a 2-wire loop powered 4-20mA current analog signal. These two signal formats are compatible with most data acquisition or PLC equipment. Badger Meter also manufactures digital displays, scalars, transmitters, and control relays for use with the Series 4000.

PVDF versions are compatible with all PVDF piping systems including SYGEF, KYNAR, SUPER PROLINE, and SANITECH. Adapters are available for use with other plastic or metallic piping systems.

PRODUCT FEATURES

1. 4-20mA Analog output programmable in field.
2. Low Flow capabilities: Enhanced versions can accurately measure flow rates as low as .25 FPS.
3. Flow detection electronics can be serviced or replaced without opening the pipe. No exposure to wetted parts.
4. Impeller bearings and shaft can be easily replaced without removing the sensor from the pipe.
5. Documented operating service life in high temperature ultra-pure water. Over 40 Months of continuous 24hr/day operation.
6. Superior particle shedding performance verified by independent laboratory testing. Particle sizes from 0.1 micron to 1.0 micron representing "on wafer" metallic contamination (ELYMAT) and liquid-born particles were monitored.
7. CE tested and approved by independent laboratory.

SPECIFICATIONS

Mechanical Specifications

Nominal Pipe Size

- 1/2", 3/4", 1" (20, 25, 32mm)

End Connections

- PVC - Plain end pipe
- PVDF - Socket weld/union

STD Flow Range

- 1 - 20 FPS

Low Flow Range

- 1/4 - 8 FPS

Accuracy

- Better than 1%

Repeatability

- +/- 0.5%

Max Temp Rating

- PVC - 140°F (60°C)
- PVDF - 220°F (104°C)

Max Pressure Rating

- PVC - 350 PSI @ 73°F
- PVDF - 275 PSI @ 65°F

Electrical Specifications

Cable

- Digital Output - 3 wire
- Analog Output - 2 Wire

Signal Digital Output

- 5 volt CMOS and LSTTL compatible

Analog Output

- 4-20mA analog output with offset compensation for ripple less than 0.25% of full scale.

Power

Digital Output

- supply voltage 9 - 20 VDC
- supply current 2mA maximum

Analog Output

- 10 VDC minimum to 35 VDC maximum. The combination of loop power supply voltage and loop series resistance must insure that the device voltage remains within these limits over the 4-20mA output span.

Accessories

- Series A4000 programming kit contains software and Model A301 programming cable.
- Model A4000-20 programming kit with 20 foot cable.

The analog output is controlled by an on-board microprocessor and digital circuitry producing precise drift free signals. The unit is programmed from a PC using Windows® based software and a connection cable. Units may be pre-programmed at the factory or field programmed. All programming information is stored in non-volatile memory in the sensor.
