

PC-100 START SWITCH

APPLICATION BRIEF

DISABLE FRONT PANEL SWITCH ONLY

This circuit allows you to disable the front panel start switch, but still allows you to start the PC-100 remotely.

NOTES:

Connect power supply ground (terminal 12) to terminal 17. This will start PC-100, and simultaneously disable front panel start button. To restart PC-100, momentarily disconnect ground from terminal 17.

The front panel start button will be disabled as long as a ground is applied to terminal 17.
